no install-packet found

Posted by jebe59 - 2010/08/24 11:09

---

i want to install jms, but 2 messages are coming from system:

there is a mistake by uploading this file

and

no install-paket could be found!

this appears after i deleted the files from tmp-directory with joomla 1.5.18

what can i do? thank for your help

JMS Multisites has a size of 2.3MB.
Some server have a limitation of the upload size that does not allow upload the file and result by an message .

Go in Joomla / Help / System Info / PHP Information
and check the upload_max_filesize parameter.

You can either increase this PHP.ini parameter or upload the package from a directory.
In this latest case, see the procedure that is described in the forum
http://www.jms2win.com/forum/26-bugs-errors-reporting/4903-installation-blank-page#4921
