I need 2 domains but one website

Posted by paul - 2010/11/27 10:49

Hello

I am currently using domaine.fr?lang=fr or domaine.fr?lang=en to change languages and I want 2 domains to do that domaine.fr in french and domaine.com and for an international site in English, but I need only one database and one installation

is it possible with you component to achieve that ?

thank you

YES you can create 2 websites with different domain name.
Each website will be independent.

You can use the same DB but in this case, you will have different table prefix for each website have their own content.
