Multiple templates inside subdomains?

Posted by pjuarez - 2010/12/21 17:18

Hi people,

I need some information about jms multisite.

I want my site http://www.test.es, and multiple subdomains, alt1.test.es, alt2.test.es... with its own templates.

In all my subdomains, in this case alt1.test.es I have a navigation bar menu, that point to different content in joomla.

My question is, Can I assign different templates for that menu items inside the alt1.test.es subdomain? and consequently the other subdomains alt2.test.es, alt3.test.es, etc.

Thx in advance

See tutorial video CP-05 that show how to configure JMS Multisites to have specific template and image folder.
http://www.jms2win.com/tutorial#jms12x-CP-05
