JMS, multisite for joomla - Joomla Multiple Sites and user sharing Generated: 16 December, 2025, 08:08 Sharing Banners? Posted by overunder - 2011/01/18 15:19 I feel really dumb, but I can not figure out how to share banners created in the master site to the slaves. can someone help? Re: Sharing Banners?
Posted by edwin2win - 2011/01/19 10:08 Different solution to share banner. If you display banners directly with HTML code that you implement in a Joomla template, you can share the Joomla template directory and that will be identical. Another solution is to use extensions that can be shared. ie. Ads Manager is an extension that can be share and manage Advertising. So perhaps it could help you manage "shared" banner. Re: Sharing Banners?
Posted by overunder - 2011/01/23 16:48 Thanks, i can look into these two extensions. Right now I am using what I believe is the pre-loaded "banner module"? mod_banner is there a way to share this default banner module or do i need to switch to something else? this is the site: www.oufishing.com ______ Re: Sharing Banners?
Posted by edwin2win - 2011/01/23 18:08 Unfortunatelly, the standard Joomla banner can not be shared.

JMS, multisite for joomla - Joomla Multiple Sites and user sharing Generated: 16 December, 2025, 08:08 ok. thank you. will look at ads manager. Re:Sharing Banners? Posted by sahil - 2011/01/24 19:11 don't feel dumb.... Re:Sharing Banners? Posted by overunder - 2011/01/24 21:34 tried to install ads manager, but it told me i had to enable legacy mode or something. now in trying to sort out KUENA, i seem to recal that that may conflict or cause problems... is there any other banner module that can be shared and works with the latest version of JOOMLA? Re:Sharing Banners? Posted by overunder - 2011/01/26 14:03 I now see that the "BANNER" component can be "propogated" and "overwritten" to the children sites. I assumed that i could update banners in the master site, then select these two options and it would overwrite the banners in the children site, thus creating a mirror of the master. but it did not seem to work that way. can i keep banners current in all sites this way somehow? Re:Sharing Banners? Posted by overunder - 2011/01/29 14:44 Still looking for a clean/easy way to share banners or text ads/links from the parent to slaves and keep them all updated together via the master. I've installed ads manager and have it working, but it does not allow me to place the ads on existing pages, rather creates a new "ad page", which is not what i need.

any ideas on other banner/advertising packages that can be shared?

can this be shared? ProJoom Multi Rotator

Guys, need help heresomeone please tell me a Banner extension, classified extension, anything along these lines	
The only requirements are that the ads/banners can be masites, AND that the banners/ads can be positioned as need	-
IE: I can not use ads manger because it requires me to cr	eate a new page to display the ads.
