Redirecting to New Slave?

Posted by nicksarbacker - 2011/05/15 17:30

Edwin,

Is it possible to redirect a the user to the newly created slave once it is created from the front end?

I've tried to modify the redirect in the backend of the "create slave" menu item, but when i use syntax like 'u{user_id}{site_prefix} it doesn't get recognized when I create a new site.

For the moment, the "redirect URL" can not contain "keywords" but I will have a look if I could add this feature in a next release of Jms Multi Sites.
I will write this idea in my to do list.

Ok, thanks... I think it would be a great function for the user to be directed to their newly created slave!

This will be available in next Jms 1.2.51 with other features that will allow hide the admin login, email and password that could be computed based on the current logged user.
An email notification will also be available to send an email to the user with it login information.
