User management
Posted by diogowernik - 2011/08/01 18:58

Hi i would like some help!

i have that:

Master - user 1, user 2, user 3
Slave1 - user 1, user 2, user 3, user 4, user 5
Slave2 - user 6, user 7

diferent database, community builder sharing, joomla 1.6.5

Can i do that?

Master - user 1, user 2, user 3 deleted
Slave1 - user 1, user 2, user 3, user 4, user 5
Slave2 - user 6, user 7

Will i have any problem with the user sharing?

Thanks

If you share the users, this share ALL the users and not allows you to have specific users depending on the websites.

So the case that you describe where there are different users list for each website is not possible when you share the users.

A potential case that would be perhaps possible under Joomla 1.6 is to create a specific sharing rule to share the users except their ACL groups. So that it would be possible to give specific permission for each users.
We have a customer who experiement that and we still not yet confirmed that it would works.
