VirtueMart - Share the DB tables between websites

Posted by mariusnpr - 2011/09/01 09:20

Hy,

Although there is another discussion related with VirtueMart on the forum, it is 2 years old and a lot of things have changed, so I opened a new topic. I need fresh information.

I need to create a MASTER online store with VirtueMart with product categories like this:
Category A
  Subcategory A1
  Subcategory A2
  Subcategory A3
Category B
  Subcategory B1
  Subcategory B2
  Subcategory B3
Category C
  Subcategory C1
  Subcategory C2
  Subcategory C3

After that I need SLAVE online stores for each category in VirtueMart:
SLAVE A for Category A
SLAVE B for Category B
SLAVE C for Category C

In my mind, it is easy to accomplish this if I can share the entire vm_ tables between sites because I can create menus using category IDs on each site. But it is possible to use Multisite component for this? What is the plugins needed to share the VM tables between sites?
The VM Users will also be shared, the rest of the information will be different (articles, menus, modules) for each website.

Please answer ASAP as I need to start this project quickly.

The facility to share the content of an extension is present in Jms Multisites itself.
So you just need the Jms Multisites extension to share the VM content.
http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=37&category_id=1
