Content sharing
Posted by joefriday - 2011/10/16 14:43

I Get the follwoing error on my menu item when trying to share a category blog layout.

Notice: Only variable references should be returned by reference in /var/www/clients/client361/web547/web/libraries/joomla/database/database.php on line 25

Which Joomla version do you use.
You report a "notice" message concerning the joomla core and the version number of joomla is required.

Also give the JMS version that you are using.
If you are not using the latest version, I suggest that get the latest version.
Concerning JMS, see the procedure in the FAQ
http://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122

_____

Sorry but there is no line 25 in joomla 1.7.1 or 1.7.2
that correspond to the error message that you provided

Notice: Only variable references should be returned by reference in
/var/www/clients/client361/web547/web/libraries/joomla/database/database.php on line 25

In addition, this is a "notice" message and not an error or warning message - just a notice.
