Admin Templates Creation

Posted by pymesign - 2011/12/17 13:44

Hi, I need help with the slave sites creation from admin (I don't want to use the front-end function). No matter what I do, I always finish on a fresh joomla installation on the new subdomain, without the custom template I've created previously on my master domain. It seems to me that there is not such a video on tutorial section, but if you could provide some tips here, it would be great. Thanks in advance.

If you want to replicate the master website to build a slave site with the same content, you can have a look in the tutorial video 0.d (moreless at the middle).
We show a JMS Templates rule called "replicMaster".

You can also find in the forum several description of the "ReplicMaster" rule.
http://www.jms2win.com/en/forum/24-joomla-multi-sites-configuration/8366-before-i-begin#8381

If you want to replicate a slave site to build a clone of slave site, you have similar thing with the tutorial video 16 that show how to replicate a slave site and also sharing the users.

All these example show a replication of an existing website and therefore avoid to have a fresh Joomla installation

You have a fresh Joomla installation because in the JMS template rule, you didn't have specified a website to replicate.
