What securty package to use

Posted by luds - 2012/01/03 14:15

Hi

I'm thinking of using the Security Suite by OSE for my multisites setup and wonder two things:

Is this ok for multisites or is there another script that is better?
Would I just install this on the master site or would each slave need its own install?

Cheers

Paul

Dear Paul, it is difficult to advice you which security extension is the best.

We know that we have customers that are using RSFirewall but I can not tell you which is the best.
Perhaps you should search in joomla forum to get advises on which extension is the best.

Thanks Edwin

Would security go on each site or just the master?

In general, it should be present in all websites to also allow analyzing each URL received by the slave site.
