Multisite menu item doesn't use SEF URLs

Posted by swcomm - 2012/01/05 23:50

Using Multisites Menu Item to create a shared menu for a number of sites. But the shared menu items don't seem to use the SEF URL for the pages on the site the menu items links to - reverts to the long, ugly URL. How to address? Thanks.

I've got the same problem...

The multisite menu open an url like /index.php?option=com_content&view=article&id=... instead of the friendly url.

Any help ?
Thanks

OK, I have noticed your remark and will have a look on it.
