Domains with different IP-Adresses

Posted by Mattz - 2012/01/25 15:24

Hi there,

does anyone know if there's an issue using JMS2Win with two Domains, that have different IP-Addresses (because of SSL-Cerificates), but belong to the same hosting-account? Actually they run in this configuration on the same account, but with two separate Joomla-Insrallations.

Thanks in advance for answers,
best regards,
Mattz.

This is not a problem.

JMS just use the URL and does not use the IP address.

Have several IP address on a server is a problem of configuration of the server itself and the apache. So all depends the HTTP Server administration tool that you are using.

If you are using cPanel as administration tool, see the cPanel help on how to setup different IP address for a same cPanel account.
