Upgrade
Posted by degard - 2012/03/11 17:24

Hi Edwin,

I saw, that there is a newer version of multisite.

1) Is the download in my package included?

2) Is it recommended to upgrade, or is it sufficient to just press the install-button under "check for updates"?

3) If not, is the update done with installing it through the genereal joomla install routine?

Bests Mark

---

1) To get the latest version, see the FAQ for the procedure.
http://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122
This will resend you a new download ID in your mail box.

2) The "check for update" just update the JMS patches definition and not the JMS kernel.
So if you think you need to get the latest version, re-install the latest JMS version over the current one.

3) No the "update" present in Joomla 2.5 will not work to get the latest version.
