Languages are not in slave website

Posted by waltervega - 2012/03/25 23:15

Hi,

I have installed a few languages in the master website but they are not available in the slave site, only english is available.

Please help me with this issue.

Thanks

If you are using the joomla 2.5, you have to go in the "extension manage" discover sub menu to discover the new installed language.
In 2.5, they now require a manual "discover" to have the languages defined in the DB. The presence of the file on the disk is no more enought to detect the language.

If you are using Joomla 1.5, the language are automatically detected.
