

Master and Slave are Not sharing users

Posted by waltervega - 2012/03/26 19:06

Hello Edwin,

I have created a fresh slave from a template where sharing was set up as follows:

- Share joomla users - selected
- Virtuemart - sharing all - selected

The problem is that whether you create a user in Master o Slave website it is not shared.

Where can the problem come from and what can I do to solve it?

Thanks in advance

Walter

Verify with the JMS Tool menu that the slave site effectively share the MySQL table (use the table tabs).

You need to have a link between the table.

If you don't have link but have physical table, this mean that you didn't created the slave site correctly as illustrated in the tutorial video 16.

<http://www.jms2win.com/en/tutorial#jms12x-16>

The key element is to define a JMS Template rule where you specify that you copy the "master webite" and that in the sharing tab that you select to share the users.
