get list of sites of a user.

Posted by chetanmadaan - 2012/04/06 02:36

Is there a way or a API that can get us a list of sites associated with a user?? or may be... a check to see if the user already has a multisite or not?

Multisites not having anything in the database is making these checks really hard.

Thanks
Chetan

When you create a menu item with "Multi sites / list of sites", the list of sites is the one created by the user.
Only the super admin see the list of all websites.

You also have another extension that allow adding a layout "anonymous" to list all the websites present for a specific "group" of sites.
