What does all this mean?

Posted by triggeru571 - 2012/05/24 05:14

Hey there,

I have just bought a copy of MultiSites and tried to install it on what is to become the slave site, but I think this has really go over my head. So first things first, is there a "professional installation" service you might offer?

Secondly, if not, what do all the following errors mean (not where it says file is not writable, it actually is as it has been CHMODed to 777).

Some errors are obvious (like add file defines.php though I have no idea where to get it from. Many are obscure (The routing wrapper is not present in this MASTER configuration file. Actions: Add 16 lines containing the routing wrapper to the slave site.)

All the messages received are below:

administrator/defines.php
Not OK
File Not Found
Actions:
Add the file
defines.php
Not OK
Different File/directory owner but within the same group identical without write permission.
Please check file/directory permission before applying the patches.
File Not Found
Actions:
Add the file
includes/defines_multisites.php
Not OK
File Not Found
Actions:
Add the file
includes/multisites.php
Not OK
File Not Found
Actions:
Add the file
installation
Not OK
Different File/directory owner but within the same group identical without write permission.
Please check file/directory permission before applying the patches.Directory Not Found
Actions:
Rename / Restore the directory
Renamed 'installation' dir:
installation/index.php
Not OK
File Not Found

Actions:
Add the file
configuration.php
Not OK
The routing wrapper is not present in this MASTER configuration file.
Actions:
Add 16 lines containing the routing wrapper to the slave site.
administrator/components/com_config/models/application.php
Not OK
The wrapper for the Master configuration is not present in Joomla administration
Actions:
Add 28 lines containing the wrapper to insert into the master configuration.php file
Update 1 line to save the appropriate configuration content
libraries/joomla/database/database.php
Not OK
Add a get instance on foreign adapters after that joomla 1.7 protected the access to the constructor of the adapters.Make piblic the protected function replacePrefix.
Actions:
Add 1 line to get new adapter instance and update 1 line to make the protected replacePrefix as public.
libraries/joomla/database/database/mysql.php
Not OK
Fix Joomla 1.6, 1.7 but to ensure that the session are written before closing the DB.
Actions:
Add 1 line to write the session before closing the DB.
libraries/joomla/database/database/mysqli.php
Not OK
Fix Joomla 1.6, 1.7 but to ensure that the session are written before closing the DB.
Actions:
Add 1 line to write the session before closing the DB.
libraries/joomla/installer/installer.php
Not OK
Install the Joomla 1.5 legacy API for the getinstance() to return a reference.
Actions:
Replace "function getInstance()" by "function &getInstance()"
This allow get the reference of the instance created instead of a copy.
libraries/joomla/session/session.php
Not OK
The single sign-in patch for sub-domain is not present
Actions:
Add 12 lines and replace 1 line by 15 lines to accept that sub-domain share the same session information for a single sign-in
libraries/joomla/user/user.php
Not OK
Fix a bug present in joomla 1.6 and 1.7 that seems have declined to fix.
See Joomla bug tracker where they decline to fix it as they are not able to reproduce it.
http://joomlacode.org/gf/project/joomla/tracker/?action=TrackerItemEdit&tracker_id=8103&tracker_item_id=24879
Actions:
Add 3 lines to return the default value when joomla has not correctly initialized the users parameters.
components/com_content/helpers/route.php
Not OK
The wrapper for the Articles Sharing is not present

Actions:
Add 4 lines containing the wrapper to avoid the redefinition of the route when the Article Sharing is present
components/com_content/models/articles.php
Not OK
The wrapper for the Articles Sharing is not present
Actions:
Add 4 lines containing the wrapper to redefinition of the models/articles when Article Sharing is presnet
plugins/system/jat3/jat3/core/ajax.php
Not OK
The patch to read the slave site params.ini file is not present.
Actions:
Replace 1 line by 6 lines to compute the appropriate slave site params.ini.
plugins/system/jat3/jat3/core/common.php
Not OK
The patch to read the slave site params.ini file is not present.
Actions:
Replace 2x1 line by 2x9 lines to compute the appropriate slave site params.ini.
plugins/system/jat3/jat3/core/admin/util.php
Not OK
The patch to read the slave site params.ini file is not present.
Actions:
Replace 1 line by 9 lines to compute the appropriate slave site params.ini.

_____

This is the list of patches that must be installed in Joomla to convert it into Multisites.

This require that you have permission ot update the files.
We have listed all the files that are modified with a brief description of the reason why we have to modify them.

If you want that we help you install, setup your environment or teaching your or develop specific things, this is possible with our billable support that you can order at
http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1
