Upgrade from Joomla 2.x to 3.x

Posted by grabbitmedia - 2017/02/08 11:06

I have numerous hot Joomla templates on many different websites with Joomla 2.x and want to upgrade to 3.x. How do I upgrade the template after upgrading Joomla and keep the same changes that I made to the 2.x templates? Or will I have to start from scratch after upgrading Joomla?

You have to check with the Template company the compatibility with Joomla 3.x.
Some might be compatible and other not.

In general, it is better to upgrade all the extensions under J2.x before upgrading to J3.x
