Redirect main site to a child site

Posted by pascal-ld - 2018/09/29 20:19

Hi,

I would like to redirect my main site https://www.mysite.com to one of my child site : https://www.mysite.com/mysubsite1

How can I do that ? I didn't find in documentation or in forum.

Thank you !

If the main site means for you the "master" website, the solution that I see is in the .htaccess where you should write an additional rule to redirect the website URL.

I think that you should write something like:

```
RewriteEngine On
RewriteCond %{HTTP_HOST} ^www.mysite.com/mysubsite1$
RewriteRule (.*) http://www.mysite.com/mysubsite1/$1
```

I didn't tested. This is just to help you get inspired of something.
Becarefull that when you do that, you will loose the access to your master.
To access your master, you will have to use another domain (or subdomain) that is not defined in any slave site.

Now if the "main" site is also a slave site then in JMS, you can update the site definition in which you add the "main" site URL into the "subsite1" definition.
In "subsite1" definition, you can also select "redirect to the first domain".

So if in the "subsite1" definition you have:

www.mysite.com/mysubsite1
www.mysite.com

Select to the first one, will redirect www.mysite.com to the "first" www.mysite.com/mysubsite1
