Broken after upgrade

Posted by wtfbrb - 2009/10/16 21:38

I upgraded to 1.2.10 and now my admin section seems to corrupted or missing on one of my sites...

stotlardrug.com/administrator

==========

The message is clear.
There is a missing file or the access to this file does not exists.
So you have to check if the path exists.
If seems it search for a ".... /multisites/stotlar//administrator/includes/defines.php" that does not exists.
So you have to check if the multisites directory exists and the same for each sub-directories.
