External Tool to create a slave site

Posted by battisti - 2009/12/03 20:54

Hi

I need to develep a plugin to create slaves sites using JMS! some idea? JMS has an API to help this process?

I read the source code but i can't find it

With JMS, you have an API described in the user manual chapter 4 and 5 that show how a plugin can be called by JMS when it creates a slave site from the front-end.

There is also a sample provided in the extension administration directory.
