Help with install etc

Posted by francoisp - 2010/02/08 07:57

Hi there, I have bought JMS, I have 2 sites now and a third coming online soon. I have installed JMS on both domain www.aserac.co.za and social.aserac.co.za. All i need shared between them and the third one coming up is just the Username & Passwords, whatever they use on any of the sites must work on any site. Now how do I het this to work or what must i buy extra to get this working and done asap please

First the installation of JMS should only be performed on the master website.
The slave site should not have the JMS installed.

Second if you want to share the users, see the tutorial video 16
http://www.jms2win.com/tutorial#jms12x-16

Reveiw the concept of JMS that is presented in the tutorial video 0
http://www.jms2win.com/tutorial#jms12x-0

The fact that you say that you have installed JMS twice let me suppose that you have installed it on two separated joomla.
If this is the case, you have created two masters that are totally independent and where you will not be able to share anything.

The concept of JMS is to have a single joomla installation and all the other websites are slaves of the master.
