Error when adding a slave site

Posted by boardhopper - 2010/02/25 14:33

Hello, I receive this error when I add or edit a slave site. I'm not sure if there is anything that I am doing wrong or not. This error appears in the ID section in the site manager.

Warning: mysqli_select_db() expects parameter 1 to be mysqli, resource given in /home2/xxxxxxx/public_html/website/libraries/joomla/database/database/mysqli.php on line 162

It seems that a call to MySQLi is performed with another type of DB than MySQLi.

Are you using both MySQL and MySQLi simulanously and different for some slave sites ?
