Hi,

I'm just planning my first multisite project and wonder if there is a plugin for adding google webmaster tools to the slave sites. I see a free download for Analytics - what are the options for webmaster.

Re: Google Webmaster Tools Posted by edwin2win - 2010/02/28 20:34

You can effectively add your "webmaster tool" identifier for each website.

You can tests the "MULTISITES_DI" to determine which "google webmaster tool" id you have to used. We have to it for our "jms2win.com" or "faq2win.com" website that are different slave sites.
