Unable to create the symbolic link

Posted by Shawn - 2010/05/05 22:13

Hi. Attached is my configuration. However, when I clicked "save", the following message showed up: "Unable to create the symbolic link -> ." Could http://www.jms2win.com/images/fbfiles/images/Capture.JPG some one please help me with it?

==========

Probably that this directory is aloready present in the deploy folder.
If the deploy directory is not empty, perhaps you have to check it before trying to deploy links inside this directory OR create a JMS templates rule that would ignore the creation of this cgi-bin directory (as it already exists in the deploy folder).
