* The site 'slave' is deployed.

Posted by jsohler - 2010/05/22 08:50

---

* The site 'slave' is deployed.
* - You can now map your new domain (http://www.woundedsouls.com/slave.com) to the directory
* '/home/woundeds/public_html'.
* - When the DNS will be updated with your new domain (perhaps you have to wait 24 hours),
* you will can go to your new domain and Joomla will request you a new installation (as usual).
* - Please use a new db prefix for each site and NEVER use 'jos' as prefix or if you want to keep 'jos' as prefix, create as many databases than you have sites.

Hi edwin2win;

The message above, is created after I create a multisite. but when I clicked the site I created, the site is error "404 Not Found"; what i'm doing related this problem please help.

But its ok in this manner
http://www.woundedsouls.com/multisites/slave/

how can I do like to look like this

http://www.woundedsouls.com/slave

Change the domain name in the list of domain and also change the deploy directory.
As the directory perhaps does not exists, also click the "check box" to ask create the directory when not present.

---

my list of domain name is only this one "http://www.woundedsouls.com/slave". but I dont see this "check box" to ask create the directory when not present." where I can found this one? thanks. and my deploy

directory is at"/home/******/public_html/{site_id}".

Hi my problem is the same as mention above..

My list of domain name is

http://www.site.com/slave1.com
http://www.slave1.site.com

when I clicked "http://www.site.com/slave1.com" I came up with this error "Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request."
and the second URL when I clicked I came up with the blank page..
Deploy Directory is at /home/******/public_html/{site_id}"

please help me thanks...

Start to check the HTTP Server configuration with the subdomain definition and also check that the director "slave1.com" exists

When you deploy the slave site in JMS, check that you have specifed the correct path.
If you are on linux platform with Symbolic Link allowed, you should have plenty of symbolic links into the directory.
If this is not the case, check that you have provided the correct full path and that you have permission to write in the directory.
