Problems with articles of domains of a site

Posted by kaitangroup - 2010/06/09 16:56

_____

I have used the latest vertion . i have created a master site http://staffnursejobs.us

and a slave site with subdomains

http://texas.staffnursejobs.us
http://california.staffnursejobs.us
http://test.staffnursejobs.us
http://texas-tx.staffnursejobs.us

here if i change the anything such as the article of front page of http://texas.staffnursejobs.us
it gonna change the frontpage of all http://texas.staffnursejobs.us
http://california.staffnursejobs.us
http://test.staffnursejobs.us
http://texas-tx.staffnursejobs.us

but i dont want it . i want articles should be different for the doamins.

Can u please help me

_____

You probably not have defined the slave site correctly because you seem that
you are all the time redirected to the master.

Perhaps you have not correectly configured your HTTP Server and that you
have redirected the subdomain to the master.
If you have used the "redirect" in your HTTP Server, this destroy the url
info and can not be received by JMS for analyse.
This is just a possible reason.

To check if you are connected on the correct website, you can put different
"site name" that you can check when you go in the "administrator".
http://staffnursejobs.us/administrator/
http://texas.staffnursejobs.us/administrator/

In both case, I see the same site name that let me suppose that you are
connected on the master.

Perhaps you also can check the slave site status.
If you had an error when creating the slave site, JMS does not save the
slave site definition in its index.
So this may also explain why you don't have the slave site recognized.

_____

hi kaitangroup;

do you check your databases?, what template you are using on creating slave site? Fresh slave site, or the one you defined?

try to check the table prefix of each slave site, maybe they're the same.

Hope it helps.
