Create Multisite in different domain.

Posted by ryscript - 2010/10/10 16:58

Hi edwin

Is this possible to make Multisite in different domain? if so what is the first step I should do.?
or do you have a video tutorial for this?.
Please help me how to do this, I really need your help.

Thanks
Ryan

---

okey I found this in other thread
http://jms2win.com/forum/23-general-questions/5362-domains-for-slave-sites
maybe this will help my problems out

As you read it in the post, this is HTTP Server dependent.

If you are using cPanel, you have to create an AddOn domain in which you provide a "Document Root".
When done, apply the procedure similar to the tutorial video CP-04 where you defined the slave site
domain = www.DOMAIN.com, DOMAIN.com
Deploy dir = the document root directory assigned to the domain in cPanel.

http://www.jms2win.com/tutorial#jms12x-CP-04

Concerning the architecture of the directories, we suggest that you follow the tutorial video 0.b - slide 21-24
http://www.jms2win.com/tutorial#jms12x-0b
