Sub Domains and Sub Directories
Posted by carmenswart - 2010/11/06 15:28

Hi Edwin,

I need a bit of assistance.

I created have the following:
1. Master Site (www.maindomain.com/headoffice)
2. Demo Site - Links to articles etc from master (demo.maindomain.com)
3. Child Site - Template created from demo site with own images and template folders. (child.maindomain.com)

I was wondering how to configure the sub domain address to be both child.maindomain.com and www.maindomain.com/child.

Regards
Carmen

Not to worry, I had a dumb moment.

i created a www redirection in cpanel to say

http://www.maindomain.com/child redirects to http://child.maindomain.com

:silly:

Regards
Carmen

You can not use redirection as this change the domain (or subdomain).

If you want to create a website in a asubdomain using cPanel, see the tutorial CP-04 that show the setup of cPanel.

http://www.jms2win.com/tutorial#jms12x-CP-04
