community builder and share of profile picture

Posted by titus - 2011/05/03 10:42

---

i just begin with JMS and spend long time viewing about your tutorial (very well done).

i make a template site sharing Db for users and cb.
work fine and all extensions cb seems to be working.

just one thing is "bad"... i lost my profile picture on the slave, and even in my master ? do you know an issue ? what i'm doing wrong ?

(sorry for my english, i'm french)

No, I don't know specific issue with CB.
I think that CB profile are saved in /images/comprofiler directory.
So check that you effectivelly have the "avatar" for the profiles.

Which CB and which Joomla version are you using ?
CB 1.4 ?
Joomla 1.5 OR 1.6 ?

Joomla 1.5
CB 1.4 + CB Subs

My first move was to see the /.../images => that were well replicated.

In fact, i realize that the Db information for avatar have been deleted.
Continuing investigations, i see that all information in CB-tabs from users in the Db was deleted... :silly:

Perhaps, i've done an error in the way of share => from Slave TO Master ? I don't know, but i've done a mistake somewhere ! I will give a second attempt ! ;)

Thanks for support,

==========

_____

As i said, that was my fault...

Works very well when all is done in the right way ! lol
JMS just need to make some test, to really be taken in hands ;)

Thanks for support and congrats for your job !
