New plugin
Posted by spiraltech - 2011/05/26 15:22

Hi Edwin, how are you.

I added a new plugin to my SOBI2 component and did this on the master. the change appears on the master but not in any of the slaves and I am not sure why. Do I have to add the plugin individually in each SOBI2 component in the slaves?

please advice.

Thanks.

PS: it was the "gallery plugin for SOBI2.

I intend to add more plugins in the future.

Thanks

:S

After that you have installed a plugin in the master website, you have to re-isntall it into the slave sites where you also want to use it.

You can either use the JMS Tool menu to perform the install or go in the back-end of the slave site and re-install the plugin.
When working on Joomla 1.6, you can also use the "discover" menu present in the "extension manager".

Hey Edwin, from your email above, does it mean I can use multi sites with j1.6???

I installed 1.5.8, cause I thot it was only configurd to work with that. is there any thing I need to note while I upgrade my Joomla package?

_____

Yes it works with Joomla 1.5.x and 1.6.x.
So you can use Joomla 1.5.23 or 1.6.3
