Configuration help for syncing two existing sites

Posted by gregory - 2011/06/08 23:30

Installation went very smoothly.

Looking for direction as most of the documentation describes installing a new Slave site.

Scenario: I have two existing sites with separate content. Intent is for SiteB(slave) to share VirtueMart and User Manager from SiteA(master). All I want to do is to install VirtueMart into SiteB and manage the products and users from SiteA admin control panel.

I've already changed the db table prefix of the Master(SiteA) site and would like to share some tables with SiteB.

Now that I've looked over the documentation and tutorials I'm more confused about how to begin and proceed.

Please offer suggestions. Thank you.
