

How to configure a domain with 'ñ'<br/>Posted by janunez - 2011/07/09 22:25<br/>

\_\_\_\_\_<br/>Hi,<br/><br/>I need a configurate a domain with 'ñ' (migrña.cl).<br/> <br/>How can I do that ?<br/><br/>I have tested with:<br/>http://www.migrña.cl<br/>http://www.xn--migraa-0wa.cl<br/>http://www.migra.cl<br/> <br/>It doesn't work because the redirect links to the master site, but not properly to the slave site.<br/> <br/>Can somebody help me ?<br/><br/>Javier<br/>

<br/><br/><br/><br/>Re: How to configure a domain with 'ñ'<br/><br/>Posted by edwin2win - 2011/07/11 18:27<br/><br/>\_\_\_\_\_<br/><br/>Yes you can use special characters in the a domain but in this case, you need to enter their ascii equivalent into the website definition.<br/> <br/>See also the website that explain the internationalized domain name.<br/>

http://en.wikipedia.org/wiki/Internationalized\_domain\_name<br/> <br/>Theorically, the host value for migrña.cl<br/>is xn--migraa-0wa.cl<br/> <br/>You can also add a firefox "tamper" addon module to see the header of the page and discover the ascii value.<br/><br/>
