how to login /administrator

Posted by jvdhout - 2011/09/29 16:02

Hi there,

I am installing JMS and I can create slave sites and edit them in the front end. But i can not acces the backend through /administrator for the slave sites. Obviously I am missing something here, but I don't know what.

the test environment with the slave site is at
test3.poplijst.nl
test3.poplijst.nl/administrator refers to the mastersite where i can login with my master-username but not with my slave-administrator username.

In the JMS Template rule that you created to build the website from the front-end, verify the user that you selected to build the new slaves sites.
If you didn't selected any site administrator, this is the first super administrator that is selected by JMS to build the new slave site.

When creating the website from the front-end, if you have specified a new admin email address and a new password, also verify that you have the correct one.

If you have decided to create password dynamically, verify that you received an email with the new credential.
