# Fopen error on deployed site but not on "master"

Posted by SafetyAndSuccess - 2011/10/17 04:07

---

I have the latest (1.7) version of Community builder installed. When I use the retrieve password form and enter a username, the CB component attempts to check if the username exists. This works fine on my "master" site but in my multisites deployed site I get the errors below when CB checks the username.

Warning: fopen(/homepages/28/d338882295/htdocs/ss-global/index2.php) : failed to open stream: No such file or directory in /homepages/28/d338882295/htdocs/ss-global/multisites/chestercounty/index2.php on line 7

Warning: filesize() : stat failed for /homepages/28/d338882295/htdocs/ss-global/index2.php in /homepages/28/d338882295/htdocs/ss-global/multisites/chestercounty/index2.php on line 8

Warning: fread(): supplied argument is not a valid stream resource in /homepages/28/d338882295/htdocs/ss-global/multisites/chestercounty/index2.php on line 8

Warning: fclose(): supplied argument is not a valid stream resource in /homepages/28/d338882295/htdocs/ss-global/multisites/chestercounty/index2.php on line 9

One very odd thing is that there is no index2.php file in the "master" site. I don't think Joomla 1.6 uses an index2.php file any longer.

Any idea about what is going on?

Thanks,
Greg http://www.jms2win.com/images/fbfiles/images/erros.png

Send us the CB for joomla 1.7 in the attachement of an email.
See contact us for the email address.
http://www.jms2win.com/en/contact

Something that you could perhaps try to do is identifying who is calling the index2.php.
