Community Builder not updating users on slave site

Posted by robbiemc - 2011/11/08 15:00

Hi

I have built a slave site direct from master site (joomla 1.7) and everything seemed to work ok until I added a couple more 'community builder' fields, tabs and plugins.

If I add data (ie text in a text field) on the master site the data does not show on the slave site although the tabs and fields are present.

If I then go to the slave site and try to add data to one of these new fields I get the following error message;

moscomprofiler::store failed: Unknown column 'cb_aboutme' in 'field list' SQL=UPDATE `fitcon_comprofiler` SET `user_id`=63,`firstname`='Robbie',`lastname`='McGregor',`hits`='8',`message_last_sent`='0000-00-00 00:00:00',`message_number_sent`='0',`avatar`='63_4eb6473c53912.jpg',`avatarapproved`='1',`approved`=1,`confirmed`=1,`registeripaddr`='',`cbactivation`='',`banned`='0',`acceptedterms`='0',`lastupdatedate`='2011-11-08 13:54:12',`website`='www.ran-uk.com',`location`='Liverpool',`occupation`='Systems Manager',`interests`='',`company`='EHFA',`city`='Liverpool',`state`='North West',`zipcode`='',`country`='',`phone`='123456',`fax`='',`cb_title`='_UE_MR',`cb_mobile`='',`cb_vatnumber`='',`cb_orgaddress`='',`cb_aboutme`='about me',`cb_specialities`='',`cb_pb_enable`='',`cb_pb_autopublish`='',`cb_pb_notifyme`='',`cb_pb_enable_blog`='',`cb_pb_enable_wall`='',`cb_pb_autopublish_wall`='',`cb_pb_notifyme_wall`='',`cb_pgenable`='',`cb_pgautopublish`='',`cb_pgshortgreeting`='',`cb_pgaccessmode`='',`cb_pgdisplayformat`='' WHERE id='63'

My understanding of JMS is that data is shared as indicated in the tools section when you look at components and tables that show master is sharing with slave.

Is this something wrong with my initial setup?

Please advise.
Cheers
Robbie

When you share a table and that you modify the layout of this table then you have to rebuild the sharing because MySQL keep a snapshot of the table layout when it creates the view.

In this case, it seems that you added columns in a table "cb_aboutme" and therefore you have to "unshared" the extension and "reshared" the extension to refresh MySQL layout description.
You have to do that in each websites where you share the Community Builder.

This is true for any extension that would change of layout and for which the new layout must be

propagated in the other websites.
