Update for Joomla 1.7.3 (and subsequent releases)

Posted by jeanmariefavre - 2011/11/16 10:46

Hi,
What should we do to update to joomla 1.7.3?
More generally it would be nice to see in a proiminent place the jms instruction to new joomla release, especially since the release cycle has been significantly shorten. We will have more and more often the case.
Thanks in advance.
Jean-marie.

Dear Jean-marie,

Joomla 1.7.2 to 1.7.3 seems to contain a migration like that was the case between Joomla 1.7.0 and 1.7.1.

So you should find information somewhere in Joomla websites to proceed with the migration.

All I can tell you is that they changed different table structure for joomla 1.7.3 that should be applied in all websites.

The migration script seems located in
installation/sql/mysql/joomla_update_172to173.sql
