

## Extensions on slave site

Posted by ferdybassi - 2012/02/02 18:00

---

1) Installed Joomla.  
2) Installed JMS  
3) Installed plugins and extensions on master site  
4) Created slave site from scratch. No template, just "Manage sites - New". I choosed to have a different slave path, in /var/www/jms/multisites/slave1  
5) Went to "Tools", selected slave site and tried to install a plugin.  
6) I got the error I attached here.  
I got this error for every plugin/component I try to install.

Which is the Joomla version ?

Which is the JMS version ?

Do you use the JMS from the master website or do you try to use the JMS tool from a slave site ?

Joomla 1.7.3

JMS 1.2.72

I'm using the JMS tools from the master web site.

Thank you.
