url pb with com_multisitescontent and com_sh404sef Posted by epanda - 2010/02/25 15:12

hi there,

does anyone know how i can remove the 'site id' var from the url after sef did its job...?

joomla 1.5.14 SH404SEF 1.5.6.398 multisitescontent 1.0.10

thank you for helping!

Re: url pb with com_multisitescontent and com_sh404sef Posted by edwin2win - 2010/02/25 21:42

You can enter customized URL in sh404drf and therefore hidden it. Just enter the URL you want to force with a specifc SEF and let sh404sef doing its job.

Re: url pb with com_multisitescontent and com_sh404sef

hi, thank you for ur reply.

Yes i can do customized URL (and i might if i dunn find better way), but the thing is that i have too many url to customize...

Cz my site has 4 languages available and sharing content through my multisites might become a common task for my multiple admins...

anyway, i tried to make a sh404sef ext plugin (as usual to set rewrite rules) but if i use this 'com multisitescontent.php' extension, the sh404sef does its job but it also prevents com multisitescontent's url rewritting process (which i cannot find?!)

So with this extension i made i can remove 'site_id' but no other vars from url! ... here is what i put in 'com multisitescontent.php':

//shRemoveFromGETVarsList('option'); shRemoveFromGETVarsList('lang'); /* if (!empty(\$view)) shRemoveFromGETVarsList('view'); if (!empty(\$layout)) shRemoveFromGETVarsList('layout'); if (!empty(\$Itemid))

shRemoveFromGETVarsList('Itemid'); if (!empty(\$id)) shRemoveFromGETVarsList('id');*/ if (!empty(\$limit)) shRemoveFromGETVarsList('limit'); if (isset(\$limitstart)) shRemoveFromGETVarsList('limitstart'); if (isset(\$site_id)) shRemoveFromGETVarsList('site_id');

what is commented is the vars needed for the process to work fine.

perhaps if i find the rewrite process of multisitescontent i can paste the code in this sh404sef ext i made...

what do u think of it? i'm getting workin on it and will post my solution if i work some out, please let me know if u have any better idea than mine.

thank u for ya time.

Re: url pb with com_multisitescontent and com_sh404sef Posted by edwin2win - 2010/02/27 11:26

The rewrite process is NOT in the multisitescontent. This is the original one of Joomla (com_content).

If you want to change the rule, you can redevelop the "router.php" that is present in the com_content to take in account the "site_id" parameter that is not used by a standard joomla article.

As you have understood, we have just call (not redevelopped) some peace of code that is present in th joomla.

Re: url pb with com_multisitescontent and com_sh404sef Posted by epanda - 2010/03/03 10:52

all right, that should do! thank you very much for telling me exactly what i need, now i got work!

Re: url pb with com_multisitescontent and com_sh404sef Posted by troesler - 2010/07/19 11:41 Hi epanda

Did you succeed in changing the router.php code? How did you do that? I still have the "site_id: ..." Thanks

Re: url pb with com_multisitescontent and com_sh404sef Posted by mismarketing - 2010/09/27 01:25

were you able to hide the site ID?

Re: url pb with com_multisitescontent and com_sh404sef Posted by edwin2win - 2010/09/27 11:36

See our following reply where we decribe an alternate solution http://www.jms2win.com/forum/25-extensions-compatibility/5099-acesef-?limit=6&start=6

Perhaps we will implement a new router.php to replace the standard joomla one with the objective to cleanup the URL that is not done by joomla itself.

Re: url pb with com_multisitescontent and com_sh404sef Posted by edwin2win - 2010/09/27 12:44

We have updated the "Article Sharing for JMS" to try hide the site ID when possible. See the change history for the procedure to update. http://www.jms2win.com/faq/article-sharing-version-10x
