Edwin,

i see myblog is a very popular extension but it isn't available for sharing via multisites.

??

well, i am not talking about replicating... but i am talking about having i blog for people over all the multisites.

thanks

Chetan

MyBlog can NOT be shared because if you want to share it, you will have to share not only all the articles but all the websites.

To make it works, this would request a "multisites myblog" like we did with the "articles sharing for JMS"

ok... so how can that be accomplished.

There is no immediate solution.

This only mean that a new "Multisites MyBlog" extension should be created like we did for the "Article Sharing for JMS".
