Flexicontent
Posted by Pixwem - 2010/04/25 18:44

Hi,

Is JMS compatible with Flexicontent?
Can we share articles?

Thanks & regards,

Pixwem.

Hi Pixwem.

1) Flexicontent is compatable with and defined in JMS. I'm also using Flexicontent.

2) Yes & No. Flexicontent is using com_content as the content. Com_content is sharable with the Article Sharing for JMS component. That means the slave site can access the same content (com_content) via the "article sharing for JMS component", but not with the Flexicontent format and fields.

To achieve flexicontent article sharing, we need a "Flexicontent sharing for JMS" component. I have asked Edwin the same question, he said it is not his intension to devleop such component.

I also want such component. Maybe we can set up a special team to develop such components ourselves and share our experience. How do you think?

@Edwin, would you mind if we set up such a sub forum in your forum?

Regards,

Seth

You are free to discuss here.
When I replied that I don't want to do it, this is because I think this is better that flexicontent do it themselve.
I don't want to create a clone of flexicontent to have the "multisites flexicontent" that we could create because we have all the information to do it. The problem is that we do not want replace the job of

flexicontent.
