Tienda
Posted by marcelbonfim - 2011/01/17 14:17

Hi,

I'm trying start a new site in the "manage sites" screen with Tienda component and it doesn't work. There is a problem with foreign key on the tables. How can i solve it? The following error shows on screen:

==========

Re: Tienda

When you have a problem to install an extension using the JMS Tool, you can always login in the slave site and use the older method that consists to re-install it into a slave site.

Can you describe more in detail the scenario that you are using and that cause problem to help me reproducing it.

==========

---

we are using multisite 1.2.46 (patch definition 1.2.52) in a fresh private server with whm and cpanel. We are using Joomla 1.5.22 with Tienda 0.6.2.(fresh install with no data) When we try to reproduce a slave site we get this error:

Create external Table Error query . _____

We have retried reproducting the problem without success.
We did our test with Tienda 0.5.6.
Perhaps you could send us in attachement of an email the same Tienda version that you are using.

Our investigation on the MySQL error code (150) let suppose that you have a problem with the DB engine time during the replication.
Tienda use the "InnoDB" engine.

During our test, we both install tienda using the "JMS Tool" menu and also with the "manage site" to replicate an existing slave containing the tienda installed.
In both case we were able to install it or copy the slave successfully.
