rCompability with crosstec contentbuilder

Posted by JerryCurwen - 2012/02/07 09:59

Hello,

yesterday i have installed the component "content builder" from the producer crosstec.
CCK Content Builder:
http://crosstec.de/en/extensions/joomla-cck-download.html

I have installed a slave site with a fresh installation from the master site. If i try to install the CCK extension from the master site in to the subsite with a fresh installation i get a message from JMS:

"Risk to define this extension.
The Tables to replicate are not defined in JMS. Contact the JMS support..."

Can somebody explain me what i have to do that these two extensions work?

Thank you.
Jerry

When an extension is not defined in the JMS Tool menu, you still have the old solution that consist to re-install the extension in the slave site back-end.

In Joomla 1.7 or 2.5, you can also use the extension manager - discover menu to try discover the extension and re-install it in the slave site.
