JDatabase patch is not installed

Posted by Grafeio20 - 2013/11/21 18:04

Hi, i been a while i had to use multisite and now when i use it i get this error

500 - An error has occurred.
JDatabase patch is not installed. Please go in check patches and install the patches

i check and yes i was a bit old on my version but i updated everything and now i have

Version : 1.3.25 - FULL (Latest available: 1.3.25)
Patches definition version 1.3.21 (Latest available: 1.3.21)

but the error remains

also a lot of REDs in the check patches page how can i fix them?
is this due to not updating on time or wrong configuration

anyone has any idea

btw i get the same message when i press the maintenance button

==========

You have to go directly to the "Multi Sites" / "Check Patches" menu and click on the install button to install the patches.
