Safe Mode Create Slave set_time_limit

Posted by battisti - 2009/12/04 18:41

When i deploy a site this error apear!

Warning: set_time_limit() : Cannot set time limit in safe mode in /home/jms/public_html/jms/administrator/components/com_multisites/classes/multisitesdb.php on line 964

this error is cause in this source

```
if ( count( $tables) > 0) {
   // Try increase the time out limit in case where there are a very high number of tables
   // Consider a maximum of 5 second per table.
   set_time_limit( count( $tables) * 5);
}
```

i suggest to use someting like this

```
if  (( count( $tables) > 0)  && (!ini_get('safe_mode'))){
   // Try increase the time out limit in case where there are a very high number of tables
   // Consider a maximum of 5 second per table.
   set_time_limit( count( $tables) * 5);
}
```

Thank you very much.
This will be included in next JMS 1.2.14.

---

i update the source of my jms instalation because without this my slave sites arent create!

If you will put then in the next version its goot to me for no lose the chance to use the automatic update!

_____

I don't understand why a WARNING does not allow you creating the slave site.
This is not a fatal error and processing continue.

The error could be due to your timeout processing that is very small and that can not be adapted by JMS to reduce the risk to have an expiration time during the DB replication.

Perhaps you could increase your PHP.ini timeout parameter (if you have the access to this configuration).

Anyway, I have already included your fix in next release.
