Unable to add & edit slave site on Site Manager

Posted by erganov - 2010/04/11 17:45

Hello Edwin.

I cannot add & edit slave site on multisite manager. The add & edit page is not completely appear. You can see the screenshot on attachment. How can I fix this.

I use Joomla version 1.5.14 on legacy mode, Joomla Multi Sites version: 1.2.26 and Patches definition version: 1.2.32.

I enable joomla debug on global configuration, but debug list not show on edit page.

Thank you

I found that, if I unactivated or commented line number 305 on file /administrator/components/com_multisites/views/manage/tmpl/edit.php, like this:

the page will successfully appear.

Problem Resolved.

This happen because user tables is huge, almost 64.000 users in there.
So, I change the query on function getOwnerList in helper.php to:

SELECT id, username FROM #__users WHERE usertype IN ('Super Administrator','Administrator') ORDER BY username

Thank you for your contribution.
I will review the code to check what happen when there is a huge list.
