Can't Edit Articles or Custom HTML Module

Posted by masse001 - 2011/01/27 07:57

Hi Edwin,

I just bought your component for a client and installed it. I was able to create and slave a site to a new directory. It shows up perfectly from the front end via the domain name. However, when I login to the Admin Panel and try to access articles or modify any Custom HTML modules it appears as if the admin template disappeared. I can't edit anything. Everything else is working OK as far as I can tell.

This should work off of a link back to the master directory correct? The master and slave are on the same server:

master: /webroot/master_folder_name/www
slave: /webroot/slave_folder_name/www

What should I be looking for?

Additionally-I am using SEF. Does your program have an issue with the .htaccess file? Do I need to do anything specific there? It almost seems like your links to certain Admin functions aren't working. I've found other components in the Admin panel that are responding the same way.

Do you have this problem with Joomla 1.5 or with Joomla 1.6 ?

Could it be that my .htaccess file is blocking access to the .xml file in the administratorcomponents sub directories?

Can't Edit Articles or Custom HTML Module-SOLVED

Posted by masse001 - 2011/01/31 05:45

From the post: http://forum.joomla.org/viewtopic.php?p=1813865

Go to root directory, librariesjoomlahtmleditor.php

In the code replace

Code:
```
// Try to authenticate
$result = $plugin->onDisplay($editor);
```

with

Code:
```
// Try to authenticate
if (method_exists($plugin, 'onDisplay')) {
$result = $plugin->onDisplay($editor);
}
```

This code works
