JMS Causing Server to Crash

Posted by Jweber72 - 2011/03/24 22:49

_____

I got an email from my host this morning saying the following website was crashing apache! They disabled my account because of this! Is JMS really worth all the trouble?

BELOW IS THE LETTER! WHY IS JMS CAUSING THIS ERROR!!!

This has been disabled for attacking the server itself via it's scripts running.

110-0 16499 0/39/66 G 0.91 328 0 0.0 0.45 0.59 74.86.183.199 bikesforgirls.hn.com GET /script.php?r=multisite/404.shtml&q= HTTP/1.1

124-0 10650 0/61/61 G 5.54 190 0 0.0 0.71 0.71 74.86.183.199 bikesforgirls.hn.com GET /script.php?r=multisite/404.shtml&q= HTTP/1.1
125-0 16500 0/32/116 G 1.78 324 0 0.0 0.32 0.70 74.86.183.199 bikesforgirls.hn.com GET /script.php?r=multisite/404.shtml&q= HTTP/1.1

This site is spawning 1000's of processes that are bogging apache down so bad it won't run.

---

the "scripts.php" is not a JMS multisites PHP code.
I don't know which is this "script.php" that use a parameter called "multisites" but this is not our component that provide such "script.php".

You should check your environment and try identifying who has created this "script.php".

If you want that we have a look on your server, this is also possible with our billable support that you can order at
http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1

If you have a look in our distribution package you will never find a "script.php".
