Error 500 on slave site

Posted by avush96 - 2011/04/20 01:14

Hi,
getting this error on slave site:
500 - DB function failed with error number 1054
Unknown column 'a.friends' in 'field list' SQL=SELECT a.`userid` as _userid , a.`status` as _status , a.`points` as _points, a.`posted_on` as _posted_on, a.`avatar` as _avatar , a.`thumb` as _thumb , a.`invite` as _invite, a.`params` as _cparams, a.`view` as _view, a.`friends` as _friends, a.`groups` as _groups, a.`friendcount` as _friendcount, a.`alias` as _alias, a.`profile_id` as _profile_id, a.`storage` as _storage, a.`watermark_hash` as _watermark_hash, a.`search_email` as _search_email, s.`userid` as _isonline, u.* FROM `slave2_community_users` as a LEFT JOIN `slave2_users` u ON u.`id`=a.`userid` LEFT OUTER JOIN `slave2_session` s ON s.`userid`=a.`userid` AND s.`client_id` !='1' WHERE a.`userid`='0'

on any menu but the home page
http://israelim.derberliton.de/index.php?option=com_community&view=frontpage&Itemid=2

need help urgent!

I suspect that you have created a slave site that is sharing the CB users with another website.
I suspect that the other website that physically contain the CB users has added custom fields (perhaps 'friends').

If I am correct, when you create the "slave2_" website, the "friend" field was not present in CB.
MySQL save the table layout when sharing a table.
As you have shared the CB content, you can just "uninstall" the CB extension in Slave2 and "re-Share" the extension in Slave2.
Use the JMS Tool menu for that.
This will rebuild the MySQL colomn snapshot that is saved when creating the link between the websites.

Hi,
I gave up on this one and deinstalled the slave.

made a new slave to public_html/multisites/slave2, marked "Create deploy directory:" and saved. all looks good from back-end but when I click the domain in order to go with installation I get this error:

Fatal error: Class 'JDispatcher' not found in
/xxx/xxx/public_html/libraries/joomla/application/application.php on line 499

I did it a few times with sub Domanin from Cpanel and without and same error!

it is simply not working!! can you help?

Hi,
problem with this error is solved by reinstalling core joomla files.
but now I have again 500 error on http://israelim.derberliton.de/index.php/community
not in the rest of the menu!!!
attached pic of the error
What can I do to fix this error????
thanks

The error message reports that 'avush96_Slave2.tmp' does not exists.
It seems this is a temporary table that is probably created by MySQL.
Perhaps you should have a look in the MySQL configuration or error somewhere to see if your MySQL had an error. (Perhaps not enough memory, or too many temporary file open, ...)

I fixed it by reinstalling Jomsocial both on Master and Slave, how ever, the community toolbar is missing and now I get error on Master: No configuration file found and no installation code available. Exiting...
http://derberliton.de/Community/
so it really works somehow on the slave but not on the Master!!
I did second Slave page: http://tlv.derberliton.de/
http://tlv.derberliton.de/index.php?option=com_community&view=frontpage&Itemid=2
and here on the community there is again error:

Warning: require_once(AZRUL_SYSTEM_PATH/pc_includes/JSON.php) : failed to open stream: No such file or directory in /home/avush96/public_html/components/com_community/libraries/facebook/facebook.php on line 22

Fatal error: require_once() : Failed opening required 'AZRUL_SYSTEM_PATH/pc_includes/JSON.php' (include_path='.:/home/avush96/public_html/plugins/system:.:/usr/lib/php:/usr/local/lib/php') in /home/avush96/public_html/components/com_community/libraries/facebook/facebook.php on line 22

This is driving me nuts!!
any idea what is going on?
thanks,
Avi

Based on the error description, it seems that a shared directory is not present.

/home/avush96/public_html/plugins/system:.:/usr/lib/php:/usr/local/lib/php'

That is a strange path as you have "/system:.:/"

I think you have to verify the path that seems strange.
Perhaps you should contact JomSocial for more info.

Hi,
why on the Master site http://derberliton.de/Community/
I get this error and the communtiy does not display at all??

No configuration file found and no installation code available. Exiting...

is it jomsocial or multisites?
Thanks again

This error message is document plenty of times in the forum.
This mean that neither the "configuration.php" files and the "installation" directory are present.
When the "configuration.php" is not present, a redirect is normally performed to call the "installation" directory to allow you proceeding with a "Joomla installer" processing.

In your case, both are not there.
