Error after backup Posted by simpt - 2011/04/23 10:14
Hi
After a akeeba backup I got this error in all menu.
JFTP::write: Bad response JFTP::write: Bad response JFTP::write: Bad response JFTP::write: Bad response
I can't change the CDMOD to 777 on any folders??
I know that, you don't know have to perform a correct backup of the symbolic links and also how to perform a correct backup that share extensions.
Will it be best with a new jms multisites installation?
Regards Simon
Re: Error after backup Posted by edwin2win - 2011/04/23 14:20
JFTP mean that you are using the Joomla FTP Layer. So check the FTP Login and password that you setup in the Joomla configuration.
See the FAQ that give a procedure to perform a backup/restore http://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-268

Re: Missing db-server DB Prefix and user Posted by simpt - 2011/04/24 10:27

Thanks for your reply.

I found out it was the owner-name of the files in com_multisites that was wrong.

It may have changed in akeeba installer.

Generated: 13 December, 2025, 07:05 --- Can you please explain to me, how I restore Missing db-server, DB, Prefix and user i manage site? Templates: Missing From DB and From DB Prefix? Wiil it be okey if I restore the whole jos_ database with MySQL PhPMyAdmin? Regards Simon http://www.jms2win.com/images/fbfiles/images/Missing_db_server_DB_Prefix_user.png
